Clotic®
(clotrimazole)
Otic solution 1%

The FIRST SPECIFIC treatment for OTOMYCOSIS

WHAT MAKES CLOTIC DIFFERENT THAN OTHER CLOTRIMAZOLE THERAPIES?

Clotic® THERAPY	OTHER CLOTRIMAZOLE THERAPIES
First specific treatment with approved indication for otomycosis	OTC products, creams, lotions and compound solutions NOT approved for otomycosis
Enhances therapeutic compliance through easy to use single sterile vials.	Messy, harder to administer, uncomfortable feeling in ear with creams and lotions
Clotrimazole formulated for enhanced antifungal efficacy	May not receive the full 1% dose in ear via creams and lotions
Carwin Cares assures product availability and free shipping. Patient samples allows providers to administer 1st dose during visit.	Hard to find compound pharmacies. OTC out of stock. No samples or starter kits for patients

INDICATIONS AND USAGE

CLOTIC is indicated for the treatment of fungal otitis externa (otomycosis) due to *Aspergillus species* and *Candida species* in patients 18 years of age and older.

Limitations of Use

CLOTIC has only been studied in patients with intact tympanic membranes. The use of CLOTIC is not recommended for the treatment of otomycosis in patients with perforated tympanic membranes.

IMPORTANT SAFETY INFORMATION

CLOTIC is contraindicated in patients with known hypersensitivity to clotrimazole. The most frequently reported adverse events (occurring in ≥ 1 patient) include headache, application site pain, tinnitus, tympanic membrane perforation, and paresthesia.

Please refer to the full Prescribing Information before prescribing CLOTIC.
